

Improved Wheel Nut Invented for Go-Karts - Designed by InventHelp Client (SAH-1158)

One of America's leading invention firms, InventHelp is submitting the GO PRO NUT to companies for their review.

PITTSBURGH, PA ([PRWEB](#)) December 14, 2016 -- An inventor from Chico, Calif., who is also a go-kart enthusiast, was dissatisfied with the performance of standard wheel nuts used on go-karts and found them difficult to install. So he came up with an improved design for these fasteners.

He developed the patent-pending GO PRO NUT to provide an easy and quick way to attach racing wheels to a go kart. At the same time, it keeps go kart racing wheels more solidly anchored for improved driver safety. Specifically, it reduces the risk of rounding and stripping of threads and corners associated with standard wheel nuts. Besides saving time and effort, it is compact, lightweight and easy to use and store. Furthermore, it is sturdy, reliable and practical. Other advantages are its convenience, effectiveness and affordable pricing.

The inventor's personal experience inspired the idea. "I wanted to ease the installation of racing wheels on the hubs of go-karts and improve rider safety," he said.

The original design was submitted to the Sacramento office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-SAH-1158, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
