

Inventor and InventHelp Client Develops Vehicle Safety System (SUU-168)

Based in Pittsburgh, Pa., InventHelp is submitting the HEAT DEATH DETERRANT SYSTEM to appropriate companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) January 06, 2016 -- Based in Pittsburgh, Pa., InventHelp is submitting the HEAT DEATH DETERRANT SYSTEM to appropriate companies for their consideration.

"I saw a news story about a child who was killed after being left alone in a hot car," said an inventor from Lake St. Louis, Mo. "I want my children to be safe from any accident that may happen, which is why I developed a system to prevent such unnecessary and tragic deaths."

He developed the patent-pending HEAT DEATH DETERRANT SYSTEM to keep a child or pet from being left in a hot vehicle unattended. The system reminds the parent or caregiver to remove the child or pet from the vehicle. It also helps if a child has locked themselves in a vehicle accidentally during play. This helps reduce the incidence of children and pets being injured or killed, which is designed to enhance personal safety. The invention offers added peace of mind. Additionally, it is adaptable for use in any new or existing vehicle.

The original design was submitted to the St. Louis office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 14-SUU-168, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
