Car computers combine elements of mobile computing, media centers, broadband networking, mobile phone technology and software into a centralized solution with the PC as the hub. Forrester Research estimates that the car computer market will soar to \$6 Billion by 2010.*

El Segundo, CA ([PRWEB](#)) January 2, 2006 -- Mp3Car, Inc., is a car computer company based out of Maryland with offices in Los Angeles.

Mp3Car continues to be in the fast lane to meet the needs of the emerging car computer market.

Car computers combine elements of mobile computing, media centers, broadband networking, mobile phone technology and software into a centralized solution with the PC as the hub. Forrester Research estimates that the car computer market will soar to \$6 Billion by 2010.

“Mp3Car is the company to watch in the car computer market,” says Robert Wray, Mp3Car CEO. “We’re developing tight working relationships with key strategic partners and automakers that will enable us to sustain our rapid growth. Our association with the Girvan Institute is further validation of our vision and is a boost to our current plans for aggressive international expansion.”

The Girvan Institute of Technology was established to accelerate the development of application and cutting edge technologies into useful products and services. The Institute leverages the technical output of research and development enterprises like NASA and The Aerospace Corporation to promote collaborative development of technology, intellectual assets, and the development of commercial enterprises.

Both Girvan Institute locations in Santa Clara and El Segundo also serve as an incubator for a small group of select start-ups by providing inexpensive office facilities and access to its deep connection of contacts in both the early stage technology business and venture capital community.

### About Girvan Institute of Technology

The Girvan Institute of Technology is a non-profit, public benefit corporation whose affiliates and partners include global research labs, Fortune 1000 companies, small and medium sized high-tech companies and a number of private equity and venture capital firms. Today, the Girvan supports the research programs of DARPA, the US Air Force, the US Department of Energy, NASA Ames (UAV Application Center, Collaborative R&D), as well as a number of research and academic organizations around the world.
