

Mechanic's Accessory Invented by InventHelp Client (BRK-1111)

InventHelp, founded in 1984 in Pittsburgh, is submitting the SIDE DOOR CREEPER to companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) December 23, 2015 -- An inventor, from Montgomery, Ala., thought there needed to be a comfortable, stress-free way to work on the wiring, lower steering column and other systems beneath a vehicle's dashboard, so he invented the patent-pending SIDE DOOR CREEPER.

The SIDE DOOR CREEPER provides a safe and comfortable way to work beneath a vehicle's dashboard. In doing so, it eliminates the need to lie awkwardly over the door sill. As a result, it enhances comfort and support and it increases efficiency. The invention features an effective design that is convenient and easy to use so it is ideal for use by automotive technicians, mechanics and do-it-yourselfers. Additionally, the SIDE DOOR CREEPER is producible in design variations and a prototype is available.

The inventor described the invention design. "My design offers improved body support for mechanics working beneath a vehicle's dashboard."

The original design was submitted to the Birmingham office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 14-BRK-1111, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
