

InventHelp Inventor Develops Truck Guidance System (BTM-2252)

InventHelp is attempting to submit this idea, the BEE BACKER, to companies for their consideration and possible feedback.

PITTSBURGH, PA ([PRWEB](#)) December 23, 2015 -- "As a truck driver, I know how difficult it can be to reverse a truck or trailer safely and without hitting anything," said an inventor from Federalsburg, Md. "In order to simplify the process and make it safer for everyone, I devised this system."

He developed the BEE BACKER to offer a more efficient way to reverse a truck or trailer. The unit eliminates guesswork and confusion. It keeps the driver from accidentally hitting anything while reversing the truck or trailer. The system saves the driver from having to ask for assistance. It assists with aligning the truck with the trailer for attachment. Furthermore, the device is adaptable for use with new and existing trucks.

The original design was submitted to the Baltimore office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 14-BTM-2252, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
