

## **Inventor Keeps Boats On A Roll**

([PRWEB](#)) October 28, 2000 -- Rollapal is a machined greaseable shaft for use within a keel rubber roller that is on a boat trailer. It is equipped with standard grease fittings for easy lubrication, so you do not need a special grease gun. E-clips for easy installation and removal. Unlike the conventional press on caps once they are put on they have to be broken off. Rollapal makes launching and retrieval of your boat easier and hassle free.

This product was developed because of the many years of changing shafts and rollers due to rust and corrosion. For three years Rollapal has been tested on a boat trailer and has been in service. Written and verbal surveys have been conducted and the response has been outstanding. Due to the proper maintenance the shafts are free from rust and corrosion.

Rollapal is a great asset to any boat trailer equipped with keel and bunk rollers. Not only will it preserve your shafts and rollers, it will also save you money in the long run.

Rollapal is a registered patent and trademark.
