

InventHelp Inventor Develops Improved Automotive Jack (HLW-1177)

InventHelp, a leading inventor service company, is working to submit the E Z Jack to applicable companies for their review and possible feedback.

Pittsburgh, PA ([PRWEB](#)) January 01, 2014 -- If you have ever been stuck on the side of the road, struggling to change a flat tire, then you know how frustrating it can be to lift and lower the vehicle using a conventional jack. As a solution to this problem, an inventor from Miami, Fla., developed the E Z JACK.

The invention makes it easier to lift a vehicle. It is designed for more convenient use than a regular jack. The design helps to enhance safety and also provides added peace of mind. In addition, the jack is adaptable for use with any vehicle, and it is easy to use.

The inventor's personal experience inspired his idea. "It can be time-consuming, difficult and dangerous to lift and lower a vehicle using a conventional jack," he said. "I thought that there had to be a safer, more effective way to design a jack."

The original design was submitted to the Hollywood office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 12-HLW-1177, [InventHelp](#), 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
