

Automobile Accessory Increases Driver Safety and Prevents Potential Theft - Designed by InventHelp Client (WDH-897)

InventHelp, a Pennsylvania-based invention firm, is submitting the SAFETY SAKE to companies for their potential feedback.

PITTSBURGH, PA ([PRWEB](#)) December 21, 2015 -- An inventor from Herndon, Va., took notice of her daughters and her daughters' friends' driving habits and became alarmed. They were placing their handbags at their feet while driving, causing great potential for sliding and interruption with the pedals. This inspired the inventor to develop the patent-pending SAFETY SAKE, an automobile accessory that contains personal effects safely beside the driver without interrupting with the driver's function of the vehicle.

SAFETY SAKE allows a driver to safely place a handbag or personal effects inside the expandable container without the items spilling out or the container sliding around. The accessory increases driver safety and hides items from theft.

"My daughters and their friends place their handbags beneath their legs while driving," said the inventor. "Unfortunately, this poses a potential danger and also limits available legroom. This inspired me to conceive of my idea."

The original design was submitted to the Washington D.C. office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
