

Stilten Introduces 2016 Nissan Maxima Exhaust, Intake and Body Kit

New Stilten intake, exhaust and body styling products offer enhanced performance and add a hint of aggression to the dramatic styling and luxurious appointments of the newly updated Maxima.

Costa Mesa, CA ([PRWEB](#)) March 03, 2016 -- Performance Exhaust System

The 2016 Maxima offers reduced cabin noise on par with leading luxury brands. For owners looking to enhance the engine note both inside and out, STILLEN offers an axle-back exhaust system to loosen the muzzle a little while offering a bump in horsepower and torque numbers.

STILLEN knows style is important to Maxima owners, so the exhaust system is finished with 4-inch angle cut, dual wall, tapered exhaust tips. They fill the factory exhaust cutouts nicely, delivering an aggressive look that matches the enhanced exhaust note.

The STILLEN axle-back exhaust system is constructed from 304 stainless steel to last through all weather conditions for years to come. STILLEN confidently offers a limited lifetime warranty against rust-through and manufacturer defects.

Cold Air Intake System

The STILLEN cold air intake system is the perfect partner for the axle-back exhaust system. It offers performance gains in the 8-10 horsepower range across the entire powerband. Like the exhaust system, the ram air intake amplifies the engine note just enough to add a sporty edge to the lux interior environment.

The intake retains the factory intake tract which leads into the STILLEN polyurethane air chamber, ensuring the coldest possible air reaches the engine. A sleek, polished aluminum intake tube adds to the look and durability of the unit. A genuine K & N high flow air filter ensures the Nissan VQ35 3.5-liter V-6 engine breathes cleanly and freely.

Body Styling Products

For Maxima owners looking to personalize their ride with some subtly aggressive exterior cues, STILLEN offers high quality body styling products. Constructed of durable polyurethane and protected by a limited lifetime warranty, they're easy to install and offer precision fit and finish. All STILLEN polyurethane body styling products include genuine 3M auto trim tape and installation instructions.

* **Roof Wing Spoiler:** For owners looking to enhance the Maxima roof line and improve aerodynamics, STILLEN offers a high quality polyurethane roof wing spoiler. Engineered and constructed for precise fit, the roof wing is available either unfinished or painted matte black.

* **Front Lip Splitter:** The 2016 Maxima features bold new styling cues that underscore its sport sedan positioning. STILLEN designers created a suitably aggressive front lip/splitter that complements the natural lines of the front bumper while adding a subtle edge. STILLEN front lip splitters also increase down-force on the front wheels and increase airflow through the radiator and heat exchanger. The 2016 Nissan Maxima front lip splitter comes painted matte black, and can also be custom painted by any quality body shop.

* **Rear Diffuser:** The STILLEN Rear Diffuser adds some low-down aggressive styling to the rear end of the Maxima. STILLEN designers realized the stock Maxima backside looked rounded and soft compared to the angular front end. They created a muscular diffuser that is much more cohesive with overall vehicle styling

cues. Once installed, the STILLEN diffuser “wakes” up the angular taillight design and covers up the stock exhaust cans for a more finished look. Engineered and constructed for precise fit, the rear diffuser is available either unfinished or painted matte black.

The 2016 Maxima performance and styling products are proudly Made in the USA by expert craftsmen at the STILLEN facility in Costa Mesa, California
