

## **Piusi USA to Launch New Fuel Monitoring System**

*Piusi USA, a diesel exhaust fluid equipment and fuel transfer pump company, has created a management system to monitor users, vehicles, and fluid dispensing for non-commercial fuel distribution plants.*

Fort Lauderdale, Florida ([PRWEB](#)) March 09, 2016 -- The MC Box 2.0 is a management system that allows consumers to monitor up to 1,000 users, vehicles, and fluid dispensing for fuel distribution plants. The MC Box 2.0 is directly linked to Piusi's new Self-Service 2.0 software that makes it simpler than ever to directly monitor accounts.

The Self-Service 2.0 software was ultimately created to allow users to react accurately and in a timely manner. The new and improved software allows users to monitor their entire system including tanks, drivers, and vehicles all with a click of a button. The software has been completely redesigned by Piusi to enhance user experience by screening real-time changes and updates all from the comfort of a user's computer or tablet. Using the new Self-Service 2.0 software, devices are able to easily communicate through LAN and WiFi, transmitting all information to necessary devices.

The software is equipped with OCIO 2.0 level sensors which continuously monitor each tank that are linked to the software. The software displays each tank's current volume of products including diesel and water levels and has the ability to set alarms and notify users of anything that may be working incorrectly. OCIO 2.0 easily collects and manages identification data of each driver and vehicle linked to the software with ease and simplicity. Additionally, the software displays all details of drivers and enables users to detect and notify drivers of any irregularities they should be made aware of.

One of the main goals in Piusi's new Self-Service software was to create a user-friendly experience. Because of this, it is very simple to navigate through the software, allowing users to make the most out of what the software offers. For instance, users are able to conduct searches directly on the platform by model, delivery number, or driver. The reporting on the platform is remarkable and nothing short of user-friendly. Users are able to create customized graphs with data pulled directly from tanks, liquids, vehicles, or drivers that are managed all with the click of a button.

Piusi USA, a fuel management system company, has created the MC Box 2.0 in conjunction with the Self-Service Management software to provide customers with speed and simplicity in regards to the management of their fuel monitoring.
