

World Patent Marketing Invention Team Introduces Bubble Block, An App Invention To Keep People From Using Mobile Phones Or Gadgets While Driving

World Patent Marketing Reviews A New App Invention. Will Bubble Block Be the Next World Patent Marketing Low Cost Success Story?

New York, NY ([PRWEB](#)) May 11, 2016 -- [World Patent Marketing](#), a vertically integrated manufacturer and engineer of patented products, announces the Bubbleblock, an application invention which creates safety features on using communication gadgets while on the road.

"The Global Car & Automobile Manufacturing industry is worth \$2 trillion," says Scott Cooper, CEO and Creative Director of World Patent Marketing. "Rising incomes in emerging countries will buoy demand and this will help the car industry grow over the next five years."

"Sending a text message or answering a phone call while driving is both careless and irresponsible," says Jerry Shapiro, Director of Manufacturing and [World Patent Marketing Inventions](#). "To help make people more concentrated on their driving and avoid using their mobile communication devices, this application invention called the Bubbleblock will definitely be needed."

The Bubbleblock is an application invention which provides added safety features for wireless gadgets particularly those used for communication. It is a unique system which comprises of a unique and predetermined sequence for accommodating incoming phone calls from a mobile device, memory for storage purposes, features in viewing and selecting phone calls and more. What this means is that this invention is able to send predetermined text messages to someone when that individual is trying to reach the user while currently driving. It informs others that the user is not available to answer the phone at the moment. Once the person has stopped driving, he or she can now view any of the calls they have unanswered. By doing this, there will be a significant decrease of road accidents caused by text messaging or calling while driving.

"People will now be able to fully concentrate on driving with the Bubbleblock," says inventor Danielle J. "This application invention prevents users from constantly grabbing their phone to answer calls or send text messages. Once someone calls them, a predetermined message is sent to the caller or texter to indicate that they are currently driving and cannot be disturbed."

Lenny Matthews, a taxi driver from New York, has this to say about the Bubbleblock: "As a driver, it is important to keep my eyes and concentration on the road but sometimes, I tend to instinctively grab my phone when someone calls. With the Bubbleblock, I am prevented from doing so, thus making me a more responsible driver."

The Bubbleblock is an application invention which will educate drivers not to use their phones while on the road.
