

D&D Instruments -- New Remanufactured Instrument Cluster Program

New Remanufactured Instrument Cluster Program

Minneapolis, Minnesota ([PRWEB](#)) April 22, 2016 -- Minneapolis, MN, April 2016 - D&D Instruments (DDI) is pleased to announce the availability of remanufactured instrument clusters for GM Trucks and SUVs produced from 2003-2006. This program expands on DDI's current repair and return program for all GM vehicles produced after 1995. Along with GM trucks and SUVs from 03-06 we also have reman units for 01-05 Chevy Impalas and Monte Carlos.

General Manager, Geoff Selby says "DDI is very excited to offer our customers another option to get their vehicle back up and running." The money saving proposition of a remanufacturing program is very attractive to private and public fleets, as well as repair facilities and end users.

A remanufactured instrument cluster provides significant cost savings over buying new. DDI keeps its customers' vehicles where they belong: on the road. Key details:

- * For GMT800 Platform Trucks and SUVs as well as 01-05 Impalas and Monte Carlos
- * Free Shipping + Pre Paid Core Return Label
- * VIN, and Odometer Statement Required

DDI repairs instrument clusters for most makes and models of passenger vehicles as well as medium and heavy duty vehicles. The company also remanufactures instrument clusters for International and IC Bus vehicles produced after 1992. Through its Expello Air Products unit DDI manufactures the Expello Automatic Drain Valve for air brake systems.

About D&D Instruments

DDI remanufactures instrument clusters for International and IC Bus vehicles produced from 1992 - present. The company also repairs instrument clusters for most other makes and models of medium and heavy duty vehicles, vocational vehicles and buses.
