

Inventor and InventHelp Client Develops Enhanced Speedometer (TPA-2280)

InventHelp is submitting the DIGI SPPED ALERT to applicable companies for their potential consideration and feedback.

PITTSBURGH, PA ([PRWEB](#)) April 26, 2016 -- "I thought that speedometers could be improved so that they were more useful to drivers," said an inventor from St. Petersburg, Fla. "I designed this so that drivers have a better idea of how fast other traffic is moving so that they can maintain a safe following distance in order to avoid accidents."

He developed the patent-pending DIGI SPPED ALERT to offer a better way to monitor how fast the vehicle is traveling. It also provides information about engine speed. The device enables the driver to better judge how fast other traffic is moving. The unit helps the driver to keep an appropriate following distance, which helps reduce the incidence of collisions. Additionally, the invention is designed to improve roadway safety.

The original design was submitted to the Tampa office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-TPA-2280, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
