

Portable AC System Prevents Overheating in Parked Vehicles - Designed by InventHelp Client (LGI-2114)

InventHelp, one of America's leading invention submission firms, is submitting the AUTO COOL to companies for their review.

PITTSBURGH, PA ([PRWEB](#)) December 14, 2015 -- Horrified by the number of children dying in parked vehicles every year, an inventor from Hewlett, N.Y., invented a portable auto-cool system. The temperature inside a parked vehicle can rise quickly, especially on hot summer days, and it can easily exceed 100 degrees Fahrenheit. This situation can quickly lead to permanent brain damage and even death for an occupant, especially very young children, elderly and/or infirm individuals and family pets.

The patented AUTO COOL, a portable AC unit that activates a flow of cool air when the measured temperature reaches a dangerous level. It helps reduce the number of children, adults and pets who die each year when accidentally left in parked vehicles. Additional features of the AUTO COOL include a sound and light alert system when the unit is activated, an ability to integrate with a child's/infant's car seat, and even the ability to monitor and activate when a person is not in a vehicle, such as when working in the sun for long periods of time. The AUTO COOL promotes safety as well as peace of mind.

The original design was submitted to the Long Island office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
