

## **Perigon HD Digital Mirror Raises Over \$41K with Three Days Left in Kickstarter Campaign**

*The blind spot eliminating digital mirror also supports picture-in-picture functionality for drivers to add different cameras for additional views*

Milpitas, CA ([PRWEB](#)) July 13, 2016 -- Originally designed for racecars, the [Perigon Automotive Technology](#) team expanded the use of their digital mirrors for personal road vehicles to help eliminate blind spots with a wider view and real-time imaging. Perigon HD Digital Mirrors have been available on Kickstarter for the past month and have raised over \$41K with a total of 155 early adopters.

While inclement weather can make it hard for drivers to see out of all their mirrors, Perigon has features that make it easier to see in even the toughest of weather conditions. Perigon uses VisionClear™ technology to enhance visibility in foggy or misty conditions and the weatherproof automotive grade camera is waterproof and works in extreme temperatures from -40° to 185°F.

“We are taking note of every suggestion and comment that we receive from our supporters. We’re very appreciative of all the feedback and learning what supporters want to see in our products,” said project creator Jerry Hsu. “From new drivers to Uber drivers and commuters, Perigon is incredibly easy to install and can help increase range of vision to reduce the chances of getting in an accident.”

Perigon has a proprietary, auto-grade HD video screen that enhances visibility, ensuring a brighter and much clearer view than standard mirrors. To install Perigon, it’s as easy as clipping it to the existing rear view mirror of any vehicle, while the camera easily mounts to any style rear window. Alternatively, the waterproof camera can be mounted on your vehicle exterior in the included housing that is provided.

Perigon’s Kickstarter campaign will run until Saturday, July 16. There are multiple rewards available, including a limited amount of Perigon HD Digital Mirrors that supporters can pre-order for \$250, which is nearly \$200 off the future retail price. For more information about the campaign and how to pre-order a Perigon HD Digital Mirror, visit <http://bit.ly/PerigonKS>.

### **ABOUT PERIGON AUTOMOTIVE TECHNOLOGY**

Perigon Automotive Technology is based out of Milpitas, California and focuses on providing a quality solution to a driving problem that the modern world faces.
