

Trailer Alert Device Invented by InventHelp Client (CCP-822)

Pittsburgh-based InventHelp is submitting the IN TOW to companies in the hopes of their good faith review.

PITTSBURGH, PA ([PRWEB](#)) September 15, 2016 -- An inventor from Crystal Lake, Ill., wanted a way to improve safety on the highway when using a trailer. As such, he invented the IN TOW for use on any trailer.

The IN TOW creates awareness by providing a safe way to alert other motorists to a trailer's presence. It's ideal for use on any vehicle towing or trailer being towed.

It helps prevent accidents. It also makes towing vehicles and trailers highly visible by clearly alerting other drivers that a trailer is being towed so they provide plenty of room to avoid an accident. In addition, it can make better Department of Transportation regulations for trailers being towed.

The inventor was inspired by wanting to make the roads safer. "I invented IN TOW to provide a way to create awareness by safely alerting other drivers to the presence of a trailer being used after I was involved in an accident with a construction trailer," the inventor said.

The original design was submitted to the Chicago office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-CCP-822, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
