

Driveway Monitor Alerts You When Vehicles Come Up Your Driveway

Are you often startled by unexpected knocks at the door? Do you have to race around to straighten up the house when unexpected visitors arrive? Do you stay awake at night, waiting for your kids to return home? DesignTech International has found a way to take away the surprise, give you extra time to prepare for visitors and to feel more secure with Driveway Monitor.

([PRWEB](#)) March 8, 2003 -- Are you often startled by unexpected knocks at the door? Do you have to race around to straighten up the house when unexpected visitors arrive? Do you stay awake at night, waiting for your kids to return home? DesignTech International has found a way to take away the surprise, give you extra time to prepare for visitors and to feel more secure with Driveway Monitor.

Driveway Monitor is making unannounced visitors an inconvenience of the past. The system is designed to give you advance notice of arrivals so that you have extra time to answer the door. Driveway Monitor will alert you before visitors arrive at your door and will inform you that your kids have returned home the moment their car pulls into the driveway. Now you won't keep your friends waiting while you rush to find your shoes and you can have the right amount of money ready when the pizza is delivered. You will have added convenience, comfort, and safety with Driveway Monitor.

The Driveway Monitor sensor is designed to only sense vehicles. It is not falsely triggered by animals, pedestrians, leaves or clouds. Wireless RF technology gives the Driveway Monitor sensor an amazing range of up to 1,000 feet away from the receiver, which is perfect for long driveways.

When triggered, the Driveway Monitor sensor sends a radio signal to the receiver to let you know that a vehicle has arrived or departed. The receiver will alert you with both a subtle, yet noticeable chime and a blinking red light.

The 12V output jack on the receiver allows you to plug in any additional appliances that you want to be turned on when the Driveway Monitor sensor gets triggered or you can connect it to the central security system. The Lamp Controller option allows to turn on any lamp appliance inside your house which makes your return at night safer and makes your house look more alive while you are gone.

Driveway Monitor installs quickly and easily. You can place the receiver in any room in your home that contains an electrical wall outlet. Simply plug in the AC adapter, stick the mounting stake into the ground next to the driveway, and attach the sensor to the stake. Absolutely no wiring is necessary.

Driveway Monitor is designed and assembled in the United States for high quality and dependability. Driveway Monitor is just one of DesignTech International's innovative consumer electronic products designed for convenience, safety, and security.

DesignTech International, Inc. is an American company that develops and markets innovative, wireless consumer electronic products.
