

ActiveWeb Services deploys Vehicle Identification Number generation functionality to satisfy the needs of a growing number of automotive industry users.

([PRWEB](#)) April 2, 2003 -- AURORA IL - April 1st, 2003 ActiveWeb Services has further extended and deepened the application software functionality it offers for the trailer, recreational vehicle, motorcycle, truck, and auto manufacturer. The Department of Transportation (DOT) requires the application of a unique identification number be assigned to a vehicle at the time of manufacturer.

“It is a simple but critical step that thousands of manufactures must manage efficiently.” Said Dan DeDecker Automotive Product Manager at ActiveWeb Services. “So many of our customers asked if we could introduce this functionality. They either had bought a small standalone program or wrote something in house, which has not proved to be an approach that is efficient or easily integrated into the systems a growing manufacturer now needs.”

ActiveWeb Services offers powerful Claims and Warranty Management, TREAD Early Warning Reporting, Service Parts Management and Single Source Publishing. The software provides a simple to deploy web-browser interface for all applications including full access to service histories with TREAD Act reporting. Intuitive navigation and online help makes learning the solutions quick and easy. ActiveWeb Services can implement standalone or fully integrate with existing processes. With a proven implementation model, which includes pre-built interfaces for top ERP and business systems, allows rapid and cost effective deployments usually within days.

About ActiveWebServices

Active Web Services produces powerful solutions that organize the complexity of spare parts, warranty and claims, TREAD Reporting, and aftermarket services into one efficient process. ActiveWebParts Warranty automates service communications and captures all the necessary data required by NHTSA while increasing service productivity, and eliminating redundant paperwork. Headquartered in Aurora, IL, Active Web Services is a global company.
