# Explore Your Capacities with the Car Rental Broker Management System (CRBMS)

*If you are in car broker business, check out this new system that will take your enterprise to a new level.*

([PRWEB](#)) May 31, 2003 -- International IT-company Titanium Systems Inc has launched a new software product that is going to skyrocket into the travel industry. Car Rental Broker Management System (CRBMS) is built for travel companies who operate in vehicle broker business and it is already working to a great effect both in the US and Europe.

CRBMS is a web-based tool to manage your car broker business requirements. Since the system works and is administered online, it will result in an incredible decrease in overall business costs and time-consumption. Whether you're out of office, on travel or at home, you still have total control over your business. With a possibility to generate algorithms and modules, CRBMS is flexible and has been developed to meet all car rental broker needs.

Seamless XML-based information flow and a synchronized link with the global distribution systems give customer an instant booking confirmation. With its multi-language and multi-level user module, both the broker and its partners have an access to the system. Although technologically advanced and innovative, the system boasts with simplicity and effectiveness. A
remarkable launching price and a 100% customised approach to each and every client's needs will even more add to its value.
