

Titanium Systems partners with CarRentOnline.com

Internationally enlarging software creator Titanium Systems, Inc. ([PRWEB](#)) September 13, 2003 -based booking system for rental car broker CarRentOnline.com. The system is brand new with innovative solutions for both rental and tour operators and is already ready working to a great effect.

Real-time booking process, multi-level user facilities, multi-language and -currency modules are just some of the features making the whole system easy both for partners and end users. In addition, integration with GDSs, multiple front- and back-office systems ensures large booking volumes yet automated and time-saving business model. The system is currently up and running and available for reservations.

Recently, Titanium Systems has developed custom-designed systems for international car and accommodation brokers throughout the world. All of the software is specifically adjusted to the client's needs and comes at a very reasonable price. "Our solutions are proven solutions," says Indrek Uibo, CEO of Titanium Systems. "We feel we have the know-how, experience and capacity. Contact us to ask why, what and how."

Besides low operating costs and easy control over the business due to the system, CarRentOnline's locations cover the majority of the world's travel destinations. CarRentOnline is an up'n'coming rent-a-car broker offering cheap rates, easy booking and quality service. (www.carrentonline.com)
