

## **System Prevents Children from Being Forgotten in Vehicles - Designed by InventHelp Client (SFO-166)**

*A leading inventor service company, InventHelp is submitting the BABY BUZZ to companies for their consideration.*

PITTSBURGH, PA ([PRWEB](#)) October 02, 2016 -- While working as a daycare provider after 15 years, an inventor from Oakland, Calif., left a sleeping child in the car by accident and realized it on the porch while doing a head count of all the kids.

"It was a rule that I did when I took the kids out of the house even if it was just to play," she said. "What really gave me the idea was to hear on the news that a father left his newborn child in the car and returned to the car, and the child died from the heat. I never thought something like this would happen to me. I just thank God it was only a few minutes because Tulsa, Oklahoma, is extremely hot, and it only takes a short time. Other places have had this happen. Prepare yourself so that it doesn't happen to your child."

The BABY BUZZ is a system that promotes better safety for a child as vehicle passenger. It helps prevent him or her from being forgotten by a parent or guardian, which avoids tragic consequences. As a result, it promotes peace of mind. The system is easy to use and compatible with all vehicles.

The original design was submitted to the San Francisco office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
