

## **LegUp LandinGear Announces Year End Results**

*LegUp LandinGear, a division of Chopper Design Services, announced today that sales growth of their unique product exceeded 350% in 2010, despite the global economy.*

Longwood, Florida ([PRWEB](#)) January 07, 2011 -- LegUp LandinGear, a division of Chopper Design Services, has announced the sales of their LegUp LandinGear Motorcycle Stabilization System grew over 350% as compared to 2009. In spite of global economic woes, demand for their system is increasing monthly.

The company reports that their target market is less influenced by economic conditions, and worldwide sales continue to grow. The company has shipped over 200 units to all corners of the globe.

Sometimes called 'The Perfect Trike Alternative', the LegUp system is available for Harley-Davidson Touring Bikes, Honda Goldwings and other bike models. This computerized system deploys a small set of wheels as the motorcycle slows, and retracts the same upon acceleration. These small retractable wheels help support the vehicle at slow speeds.
