

Improved Emergency Warning System for Vehicles Invented by InventHelp Client (MTN-2320)

One of America's leading inventor service companies, InventHelp is submitting SIS to applicable companies for their review.

PITTSBURGH, PA ([PRWEB](#)) November 25, 2015 -- "I was driving and came across an accident in the middle of the night," said an inventor, from Clinton Corners, N.Y. "I thought there needed to be a better way to alert other drivers of accidents on the road, so I invented this." He invented the patent-pending SIS.

The SIS offers a clear way to alert motorists of a crashed vehicle. In doing so, it ensures that the vehicle involved in an accident is highly visible to other drivers and it improves the visibility of the accident at night and in the rain, fog or snow. As a result, it enhances safety and it helps to prevent additional accidents. The invention features an adaptable design that is ideal for vehicle owners. Additionally, the SIS is producible in design variations and highly visible.

The inventor described the invention design. "My design offers a safe and clear way to alert drivers of accident situations."

The original design was submitted to the Manhattan office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 14-MTN-2320, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
