

InventHelp Inventor Designs GASIFICATION UNIT (SUU-157)

InventHelp, based in Pittsburgh, Pa., is submitting the GASIFICATION UNIT to companies in the hopes of a good faith review.

PITTSBURGH, PA ([PRWEB](#)) December 03, 2015 -- An inventor, from Cedar Hill, Mo., thought there needed to be a more effective way to improve a vehicle's fuel consumption in order to maximize mileage and minimize pollution, so he invented the patent-pending GASIFICATION UNIT. "If it becomes required equipment for all automobile manufacturers, the potential benefits of this system can be maximized," he said.

The GASIFICATION UNIT provides more complete combustion for motor vehicles. In doing so, it increases gas mileage. It also helps to reduce harmful exhaust emissions. As a result, it enhances fuel economy and it could help to benefit the environment. The invention features a safe and effective design that is convenient and easy to use so it is ideal for vehicle owners. Additionally, the GASIFICATION UNIT is producible in design variations and a prototype is available.

The inventor described the invention design. "My environmentally-friendly design helps to reduce harmful exhaust emissions."

The original design was submitted to the St. Louis office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 14-SUU-157, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
