

## **Daimler Unveils Auto Detailing Steam Car Wash Machine With Fifteen Times More Pressure Than Vapor Steam Cleaner Equipment**

*Powerful auto detailing machines simplify time-consuming and labor-intensive exterior car cleaning applications for any serious car wash professional. New steam pressure washers are specifically designed car detailing and cleaning cars more effectively than vapor steam cleaners.*

Woburn, MA ([PRWEB](#)) January 05, 2013 -- Daimler Industries, Inc.®, the global leading American brand of portable car wash and other industrial cleaner equipment, including durable carpet steam cleaner systems, popular steam car wash machines, a variety of industrial floor cleaning machines, and hundreds of different models sold to customers spanning over 240 nations worldwide, is now marketing the Super Max™ 6120SCW to auto detailers and car dealers seeking better alternatives than extremely low moisture vapor steam cleaners. The 6120SCW is low flow auto detailing equipment tailored for car cleaning applications.

“Vehicles demand extra effort and time when it comes to cleaning in a way to create the best possible results. Eliminating tough deposits of brake dust, mud, grease, oil, and tree sap on exteriors is one of the hardest jobs that professionals involved in car detailing business face on a daily basis,” says Matthew Baratta, spokesperson of Daimler Industries, Inc.®. “Daimler® is excited to offer the Super Max™ 6120SCW, a powerful steam cleaning machine designed specifically to meet the needs of those in the car detailing business. Detailing pros can finally utilize equipment that will save time and allow them to maximize productivity and earnings.”

The Super Max™ 6120SCW is an advanced version of car pressure washing equipment that expertly combines the steam temperatures of steam cleaners with the higher pressure levels offered by pressure washers to create the best car wash equipment for industrial and commercial vehicle detailing applications.

About three-fourths of the time needed to maintain a car is spent on cleaning the exterior surfaces. Almost eighty percent of auto detailing professionals regularly resort to harsh chemicals and rigorous scrubbing to eliminate tough deposits from glass surfaces. Although the car cleaning experts are aware, in most cases, that excessive scrubbing and certain chemicals can damage vehicle exteriors, the stubborn nature of grease and dirt deposits often necessitates the use of such products and techniques.

Using Daimler®’s Super Max™ 6120SCW enables auto detailing professionals to avoid spending too much time manually removing dirt and other residues from car exteriors. More intense physical labor results in greater operator fatigue. The very best car wash equipment will maximize productivity while allowing the users to clean without the strain associated with inferior car cleaning methods.

The company's car pressure washing equipment creates temperatures as high as 250°F with a very low flow rate of 0.5 gpm, and a pressure level of 1000 psi to help powerfully, yet gently dissolve and wash away the toughest deposits easily and effectively.

The Super Max™ 6120SCW is a uniquely-configured electric pressure washer and car wash system in one, blending an optimum flow rate, pressure level, and temperature to help ensure superior cleaning results without posing any risk of damage to the vehicle surfaces. When compared to conventional cold water pressure washers or vapor system based steam car wash machines, the functions of which are limited to cleaning only a limited number of surfaces, the Super Max™ 6120SCW helps maintain almost all vehicle surfaces including tires,

wheels, glass, engines, and more with ease.

Composed of chemical/chip resistant, powder-coated steel, the Super Max™ 6120SCW is rugged and durable enough to withstand rough use in car wash centers as well as in vans or trucks when used as mobile car wash equipment. The versatility exhibited by the Super Max™ 6120SCW is unlike other technologies in the car detailing industry. The vehicle detailing system provides engine compartment maintenance and snow melting on the car surfaces. The electric-powered, propane-heated version is an asset to any vehicle detailing business.

In order to take the cleaning services of car wash services to the next level, the Super Max™ 6120SCW comes with an assortment of accessories including a trigger wand, steam nozzle, and a 25 feet long high pressure steam hose. Longer hoses can be purchased with quick disconnections to allow users to extend hoses to greater lengths. Buyers can also upgrade the hose length from the machine to the wand to 50 feet or longer.
