

## **Township of Union Department of Public Works Selects StarPath Mobile® GPS Fleet Management System for Vehicle Tracking and Safety**

*The StarPath Mobile® system will enable the Union Township, Department of Public Works to fully optimize their fleet assets by providing real time visibility of their vehicles. The system is being implemented to support their services to township residents and businesses as well as safety.*

Union, NJ ([PRWEB](#)) January 6, 2009 -- StarPath Technologies, LLC today announced that the Township of Union, Department of Public Works has selected StarPath Technologies, LLC as their provider for GPS fleet management for their vehicles. StarPath Mobile®, will provide the township the ability to view each vehicle in real-time, and visually see the exact vehicle location to increase employee safety as well as ensure their fleet is operated with public safety in the forefront, while servicing the needs of their residents and businesses.

The web-based software is also capable of generating reports that enables the township to analyze vehicle metrics so that they can strengthen the management of their fleet and workforce - ultimately to enhance their service. The system will be utilized to track garbage trucks, sweepers and plows.

"We are excited about implementing [StarPath Mobile](#) and working with the StarPath Technologies team," said Frank Bradley, Township Administrator for the Township of Union. "StarPath Technologies not only offered a superior system, they had the cost effective and easily managed solution that supported a dedicated approach to our business model," added Bradley.

"StarPath Technologies is dedicated to bringing value to the Township of Union by providing them with a uniquely versatile system to help them fully optimize their fleet assets," said John P. Lucich, President of StarPath Technologies. "We appreciate the opportunity to help them achieve their fleet management goals," added Lucich.

### About the StarPath Technologies

StarPath Technologies, LLC is a leading provider of web-based applications for the government and corporate markets and was a successful spinoff of the Network Security Group, Inc. in June 2008.

StarPath Technologies provides a unique approach in the area of Automatic Vehicle Location ([AVL](#)) and enables their clients to effectively and easily implement StarPath Mobile a cost effective solution that enables clients to house the data on their site.

StarPath Technologies offers government agencies and corporations a free thirty day trial period at no cost or obligation. StarPath Technologies will ship modems to potential clients that meet our criteria and enable them to track two to three of their vehicle in real-time on a system dedicated to their vehicles only.

StarPath Mobile is the only web-based multi-agency system that allows several clients to access their vehicles on a single installation. The system can be configured to view their agency vehicles only or to be able to view the vehicles of all agencies on the single installation. It is the perfect solution for shared services. Multiple security levels control the access to view vehicles.
