

Exceptional Used Japanese Engines With Unparalleled Warranty from Engine World Inc and Now We Also Sell Rebuilt Japanese Engines

Engine World upholds unrivaled warranty for JDM engines.

Houston, Texas ([PRWEB](#)) December 31, 2013 -- Amid all the suppliers of used Japanese engines, one Houston company aims to stand above the rest.

Automotive specialists are turning to Engine World for used engines for Toyota, Honda, and Isuzu motor replacement. The company's comprehensive inventory makes finding the right engine easy the first time by browsing Engine World's listings on their site <https://japaneseusedengines.net/>

The extensive inventory of used Japanese engines is not the only reason automotive technicians are turning to Engine World. The company has a strong reputation of bringing the best JDM engines to the US. They are passionate about their customers receiving a high quality engine as they are about the engines themselves. They are so sure about the quality of the engines that they give their customers guarantees that are almost unheard of in used engine suppliers.

Vast JDM engine selection

Visiting Engine World is like opening an encyclopedia on Japanese engines. Their used engine inventory of over 5,000 engines includes Acura, Toyota, Honda, Subaru, Isuzu, Nissan, and Mitsubishi to name a few. They even carry the light to medium duty Isuzu engines that are used in many delivery trucks like Isuzu NPR & NQR trucks.

Tested Used Japanese Engines

Engine World stands by their commitment to deliver quality engines. Each engine that is sold undergoes the Ultra 5 test. Compression is manually verified, leak down tests performed, oil pressure verified, and the engine checked for sludge.

Unparalleled Warranty

Engine World is putting money where their mouth is by offering customers a 6 month guarantee. The 6 month limited warranty covers used gasoline engine long blocks and rebuilt Isuzu engines for 6 months from the purchase date, regardless of the number of miles driven. Performance DOHC engines carry a 30 day start up warranty from date of purchase.

The warranty covers pistons, rings, crankshaft, camshafts, and bearings among other working parts in a long block. Engine blocks and heads are warranted crack and distortion free. When the used engine is installed in the appropriate model by an approved mechanic, the warranty makes purchasing a used JDM engine virtually risk free. Such a warranty is rare in used engine sales.

Engine World wants to be known for the quality of their used Japanese engines. According to the company, "we care more for repeat business and we know very well that this can only be done if we gain the TRUST of our customers. We go an extra mile to test each and every engine and transmission that rolls out of our container from Japan. We know trust is the biggest deciding factor when buying a used engine."

With assurances like that, Engine World's customers can't go wrong in buying a used JDM engine from Engine World Inc.
