

InventHelp Inventor Develops Vehicle Safety System for Young Children (HUT-217)

InventHelp, based in Pittsburgh, is submitting the CHILD SAFETY MONITOR to appropriate companies for their review.

PITTSBURGH, PA ([PRWEB](#)) July 21, 2016 -- "Last year, 28 children died of heat stroke because they were left unattended in vehicles," said an inventor from Tomball, Texas. "I thought that there had to be a way to prevent such tragic deaths, which led me to invent this safety system."

She developed the CHILD SAFETY MONITOR to prevent a small child from being left behind in a motor vehicle unattended. The system reminds the parent or caregiver to take the child along when exiting the vehicle. This is designed to enhance personal safety. Also, it offers added peace of mind to parents and caregivers. The invention is usable in any new or existing vehicle. Furthermore, it features automatic operation.

The original design was submitted to the Houston office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-HUT-217, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
