

Vehicle Inspection Systems Announces 2nd Generation of the VIS-Shine

Due to overwhelming customer demand, the new American-made VIS-Shine now polishes wheels of all sizes in a simpler process. Vehicle Inspection Systems (VIS) is offering customers with the original VIS-Shine machine an adaptor package.

ORLANDO, FLA. ([PRWEB](#)) July 26, 2016 -- Vehicle Inspection Systems, the front runner for heavy duty vehicle, truck and bus safety in the trucking and transportation industry for more than 20 years, has announced the next generation of the VIS-Shine polishing machine.

The new VIS-Shine can polish wheels of all sizes from a 19.5” to a 24.5” wheel. The unit is fully assembled with everything a customer could need to shine multiple sized wheels. The patent-pending system was developed due to overwhelming demand since the introduction of the original VIS-Shine. Customers asked for a machine that could polish all wheel sizes, and with dealer input and feedback, VIS is pleased to launch the new product manufactured in the USA in our Orlando facility.

“Our customers asked for a versatile machine and we listened,” Mark Keegans, Vice President of VIS said. “The unit will put a shine on the wheel while the wheel is still on the truck. The maintenance tool will help preserve the shine of both new and refurbished wheels.

The unit has one bracket that does not need to be removed at any stage of the process. The bracket simply needs an adjustment. The original VIS-Shine machine had a big drum that fit over the hub with multiple brackets that technicians would need to move around.

Vehicle Inspection Systems is offering customers with the original VIS-Shine machine an adapter kit so everyone can experience the updates.

“We strive to provide our customers excellent service and our new VIS-Shine machine delivers just that,” Mark said. “This streamlined unit will make our customers’ lives easier, which is our end goal. VIS has been providing inspection and rim safety equipment for more than 20 years, and our customers know they are getting a reliable, durable product with the new VIS-Shine.”

For more information regarding the new VIS-Shine machine or the adapter kit for the original unit, visit our website at vischeck.net or call us at 866-847-8721.
