

InventHelp Inventor Develops Child-Safety System for Vehicles (LAX-708)

InventHelp is working to submit the idea, Forget Me Knot, to interested companies in the hopes of their good faith review.

PITTSBURGH, PA ([PRWEB](#)) August 13, 2016 -- "My son was participating in a LA science fair and had to come up with an invention idea," said an inventor from Harbor City, Calif. "Due to the recent deaths of children left unattended in cars, I decided to produce an invention to protect children."

She developed the patent-pending Forget Me Knot to prevent a child from being left in a vehicle unattended. The unit ensures that parents remember to take the child with them when exiting the vehicle. This safeguards the child from hyperthermia, as well as hypothermia, which is designed to enhance personal safety. The system offers added peace of mind to parents. Furthermore, it is adaptable for use with both new and existing vehicles.

The original design was submitted to the Los Angeles office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-LAX-708, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
