

SuperSprings, Inc. Announces Relationship with Home Team Service – Leaders in the Pest Control Industry

SuperSprings, Inc. today announced it has established a relationship with Home Team Service of Dallas, Texas to provide suspension enhancement on their fleet of half-ton and compact pickup trucks.

CARPINTERIA, CA ([PRWEB](#)) March 19, 2004 - SuperSprings, Inc., a leader in the market for self adjusting suspension stabilizers, today announced it has established a relationship with Home Team Service of Dallas, Texas to provide suspension enhancement on their fleet of half-ton and compact pickups due to loading increases from the equipment and supplies Home Team are upfitting to their trucks.

"We are delighted to have established this alliance with Home Team Service as we feel our SuperSprings line of products provide significant improvements to the load carrying capabilities and handling of these vehicles," said Gerry Lamberti, Chief Operating Officer at SuperSprings. "Additionally, we typically see reduced tire wear and a significant reduction in body roll in trucks fitted with our equipment, without hardening the ride."

As with most pest control companies, upfitment is required on light duty trucks resulting in stresses on existing suspension, shocks and tires. Field tests determined that the SuperSprings medium duty spring provides the necessary enhancement to the majority of Home Team Service's compact pickups while the SuperSprings heavy duty models accommodate their half-ton and three-quarter ton models.

SuperSprings is a self-adjusting suspension stabilizer that gives users extra load capacity, improves towing, and prevents rear-end sag without hardening the ride. Working in parallel with the vehicle's suspension system, SuperSprings attach onto the existing rear springs and "kick-in" only as needed when carrying a heavy load, towing, entering a sharp turn, or during an emergency panic over-correction. SuperSprings also reduce wheel hop for a smoother ride while the anti-sway feature reduces body roll giving enhanced driver control.

About SuperSprings:

Founded in 1996, SuperSprings International, Inc. developed a patented line of self-adjusting suspension stabilizers that solve many of the handling and suspension problems associated with loads carried by passenger vans, pickup trucks, minivans, and SUVs. The Company's products give users extra loading and towing capacity and prevent rear-end sag without hardening the ride on vehicles having leaf spring rear suspension systems.

The product was developed for the American market with production initially established in California to serve the West Coast. Marketing efforts have continued to expand and SuperSprings are now distributed through a national dealer and distributor network throughout North America.

Product applications for SuperSprings have evolved from being solely for pickup trucks to a broad cross section of vehicles including SUVs, 15 passenger vans, minivans, and RVs including Class C motorhomes and campers. SuperSprings have also been accepted by large-scale manufacturers in the van conversion business.

SuperSprings provides various solutions for suspension enhancement for work trucks ranging in capacity from compact pickups to full-size pickups and one ton work trucks. SuperSprings is the leading supplier to

commercial work truck/van users such as field service-bed trucks, armored vans, street sweepers, commercial vans, landscapers, and general contractors.
