

InventHelp® Client Patents "Tire Pro" - Invention Could Offer Safe Alternative to Traditional Tire-Changing

InventHelp®, America's leading inventor service company, announces that one of its clients, an inventor from Wyoming, has designed an electrical jack that would automatically raise and lower a vehicle to make it easier to change a tire. This invention is patented.

Pittsburgh, PA ([PRWEB](#)) January 8, 2010 -- InventHelp®, America's leading inventor service company, announces that one of its clients, an inventor from Wyoming, has designed an electrical jack that would automatically raise and lower a vehicle to make it easier to change a tire. This invention is patented.

The "Tire Pro" device would help to prevent an individual from having to manually jack the vehicle up and down. Suitable for use on any vehicle, the tool would aid in minimizing the risk of injury caused by individuals getting under a vehicle to perform tire changes or straining to operate a jack. Additionally, the unit would be ideal for use by elderly individuals and individuals with limited mobility.

The Tire Pro would consist of an electric motor connected to a redesigned vehicle jack. The device would be constructed from metal and measure approximately 6-inches long and 6-inches wide, varying in height. The electrical motor would be housed inside of a box and the jack would connect to the side of the box. The jack would feature an interchangeable top that would accommodate the different points on a vehicle where a jack may be placed. An individual would place the jack under the proper place on the vehicle, then press the up/down button to raise the vehicle into the air. When the task is completed, the individual would then press the up/down button to lower the vehicle back to the ground.

InventHelp® is attempting to submit the invention to companies for review. If substantial interest is expressed, the company will attempt to negotiate for a sale or royalties for the inventor.
