

InventHelp Inventor Develops Enhanced Sun Blocker (SAH-431)

InventHelp, founded in 1984 and based in Pittsburgh, is working to submit the E-Z Shade to applicable companies for their consideration and possible feedback.

Pittsburgh, PA ([PRWEB](#)) January 09, 2014 -- When your vehicle is parked in the baking hot sun for hours, some real damage can be done to the expensive upholstery. Of course, the sunlight also heats up the vehicle's cabin like an oven. To avoid these problems, an inventor from Fremont, Calif., developed the E-Z Shade.

The accessory offers an improved way to block sunlight. It keeps the interior of the vehicle cool and comfortable. The device also prevents upholstery from being damaged by sunlight. The convenient design offers an alternative to conventional sun blockers and eliminates hassles and frustrations. Additionally, it is ideal for use on hot, sunny days.

The inventor's personal experience inspired the idea. "I found that the sun blockers available in stores were hard to set up and frustrating to deal with," she said. "I came up with this easier-to-use version to avoid these problems."

The original design was submitted to the [Sacramento office of InventHelp](#). It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 12-SAH-431, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
