

Modified Forklift Invented by InventHelp Client (JMC-1786)

InventHelp, a Pittsburgh-based invention firm, is submitting the 4 WHEELER FORK LIFT ATTACHMENT to companies for their review.

PITTSBURGH, PA ([PRWEB](#)) November 21, 2015 -- An inventor, from Ely, Nev., thought there needed to be an easier way to lift and move heavy loads, so he invented the 4 WHEELER FORK LIFT ATTACHMENT.

The 4 WHEELER FORK LIFT ATTACHMENT offers a safe and effective way to lift and move heavy loads. In doing so, it provides an alternative to using a full-size forklift and it eliminates the need to struggle and manually lift objects. As a result, it could help to prevent lifting related injuries. The invention features a versatile design that is easy to use so it is ideal for use by the owners of all-terrain vehicles, construction workers, farmers and hunters. Additionally, the 4 WHEELER FORK LIFT ATTACHMENT is producible in design variations.

The inventor described the invention design. “My design enhances safety when lifting, moving and loading heavy objects.”

The original design was submitted to the Telemarketing office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 14-JMC-1786, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
