

InventHelp Invention Provides Soothing Motion for Traveling Babies (LAX-639)

InventHelp, based in Pittsburgh, is submitting the ROCK N BABY CARSEAT to appropriate companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) November 21, 2015 -- How would you like to be able to rock your baby while you're driving your car? Well, thanks to two inventors from Canyon County, Calif., you can now do both at the same time safely.

They developed ROCK N BABY CARSEAT to provide a calming, swaying motion to keep a peaceful baby settled or comfort a fussy infant. Furthermore, it keeps a baby comfortable without any extra effort on the part of the parent. As a result, it affords peace of mind for busy on-the-go parents. Besides saving time and effort, it operates automatically to leave the parents' hands free. What's more, it is convenient, easy to install and remove, and affordably priced. It is also safe, effective and durable. In addition, it is versatile for use.

The inventors' concern for keeping babies comfortable while traveling by motor vehicle inspired the idea. "We wanted to give on-the-go parents a convenient way to sooth their babies while keeping their hands free to drive or participate in other activities," one of them said.

The original design was submitted to the Los Angeles office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 14-LAX 639, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
