

Vehicle Door Hinge Repair Device Invented by InventHelp Client (HTM-3171)

InventHelp is working to submit the HINGE MENDER to appropriate companies in the hopes of their good faith review.

PITTSBURGH, PA ([PRWEB](#)) August 22, 2016 -- An inventor from Miamisburg, Ohio wanted a way to more easily repair worn vehicle door hinges. As such, he invented the HINGE MENDER for use by auto shop workers and any automotive DIY enthusiast.

The HINGE MENDER allows users to repair a worn door hinge without having to remove the door or even the hinge assembly. It would enable the speedy and easy repair of the hinge and would work with any typical welding system. Also, it matches factory specs.

The inventor was inspired by wanting an easier way to repair worn door hinges. "I knew it could be difficult to remove an entire vehicle door and hinge assembly to repair the hinge," said the inventor. "I decided to create a device that would make the repair process quick and easy."

The original design was submitted to the Telemarketing office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-HTM-3171, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
