

InventHelp Invention Designed for Easy Tire Removal (HSC-508)

A leading inventor service firm, InventHelp is submitting the TIRE CHANGER to companies in the hopes of their good faith review.

PITTSBURGH, PA (<u>PRWEB</u>) August 24, 2016 -- Both professional auto mechanics and car owners who prefer to change their own tires face the challenge of stubborn lug nuts. Fortunately, two inventors from Houston, Texas, have devised a new resource for easier tire removal.

They developed TIRE CHANGER to ease the task of changing a tire. As such, it provides the needed torque for loosening the lug nuts. It is particularly helpful for individuals with limited hand strength. Thus, it saves time and effort. At the same time, it is sturdy to withstand wear and tear. Furthermore, it is safe, effective and easy to use. It is also convenient, practical and affordably priced. In addition it is adjustable to fit different-sized tires.

The inventors' personal experience inspired the idea. "We helped a woman who was trying to change a tire without a lug wrench or a four-way wrench, one of them said. "Since it was difficult to get the tire off without the proper tools, we decided to create one that would get the job done faster and easier."

The original design was submitted to the Houston office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-HSC-508, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
