

## **ACTION TRACTION SYSTEM Invented by InventHelp Client (LGI-402)**

*Based in Pittsburgh, Pa., InventHelp is submitting the ACTION TRACTION SYSTEM to appropriate companies for their review.*

PITTSBURGH, PA ([PRWEB](#)) September 22, 2016 -- An inventor, from Smithtown, N.Y., thought there could be an improved way to provide traction for vehicles stuck on slippery surfaces, so he invented the ACTION TRACTION SYSTEM.

The ACTION TRACTION SYSTEM provides an effective way to free a stuck vehicle from slippery conditions. In doing so, it enhances traction and safety and it helps to prevent tires from spinning on ice, snow or mud. As a result, it saves time and effort. The invention features a safe design that is convenient and easy to use so it is ideal for vehicle owners. Additionally, the ACTION TRACTION SYSTEM is producible in design variations.

The inventor described the invention design. “My design provides a safer and easier way to free a stuck vehicle.”

The original design was submitted to the Long Island office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-LGI-402, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
