

InventHelp® Client Invention Prevents Accidental Key-Fob Usage (BRK-2149)

An Alabama-based InventHelp client has invented the Transmitter Protector, which is being submitted to companies for review.

Pittsburgh, PA ([PRWEB](#)) September 23, 2016 -- An inventor from Fosters, Ala., had trouble with my key fobs arming and disarming car alarms and a home-security system while carrying them in his pockets, so he decided that there needed to be a way to prevent this common problem. To meet this need, he designed and created a prototype of an idea.

The patent-pending Transmitter Protector avoids accidental pressing of key-fob buttons. As a result, it prevents unintentional activation and deactivation. Overall, it promotes convenience. The invention is easy to use and compatible with all key fobs.

The original design was submitted to the Birmingham office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-BRK-2149, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
