

## **Automatic Door Opener Invented for Motor Vehicles - Designed by InventHelp Client (NJD-1168)**

*InventHelp, a Pittsburgh-based invention firm, is submitting the POP AJAR to appropriate companies for their consideration.*

PITTSBURGH, PA ([PRWEB](#)) October 15, 2016 -- Since it's convenient to press the button to remotely unlock the car door, the real challenge comes in trying to physically open the door. This often happens when the driver's hands are full and/or the weather is uncooperative. Fortunately, an inventor from Montclair, N.J., has risen to this challenge.

He developed POP AJAR to provide quick and easy entry to a motor vehicle with no effort on the part of the driver. In other words, it eliminates the need to manually open the door by pulling on the handle. As such, it is time-saving, safe and practical. Furthermore, it is easy to use and maintain. At the same time, it is convenient, effective and reasonably priced. While it affords peace of mind for anyone, it is especially beneficial for elderly and handicapped individuals. In addition, its simple design minimizes production costs.

The inventor's personal experience inspired the idea. "Those times when I had to open my car door when my hands were full or the weather was bad got me thinking how nice it would be if I could unlock and pop open the driver door with the press of a button," he said.

The original design was submitted to the New Jersey office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
