

InventHelp Invention Allows For Safer U-Turns (SFO-333)

Founded in 1984 in Pittsburgh, InventHelp is submitting the U-TURN SIGNAL FOR VEHICLES to companies for their consideration.

PITTSBURGH, PA (<u>PRWEB</u>) January 11, 2017 -- After observing so many near accidents and actual accidents caused by drivers making U-turns without warning, an inventor from Antioch, Calif., decided that there should be a safer way to do this. To meet this need, he designed the U-TURN SIGNAL FOR VEHICLES.

This invention enables a driver to make a U-turn in a safer manner by ensuring that other drivers and pedestrians know that the U-turn is about to happen. This helps prevent accidents that can result in injuries and fatalities. Durable and easy to use, the U-TURN SIGNAL FOR VEHICLES is designed to promote safety and peace of mind for all drivers.

The original design was submitted to the San Francisco office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-SFO-333, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
