

More Convenient Children's Car Seat Invented by InventHelp Client (NJD-1031)

A Pennsylvania-based invention company, InventHelp is submitting the EZ SEAT to companies for their review.

PITTSBURGH, PA ([PRWEB](#)) October 31, 2016 -- Since it's mandatory to have car seats for children, they either must be installed in vehicles at all times, or they have to be removed and replaced according to when the child is present in the vehicle. Not only is this a hassle, but it takes up precious backseat space even when the child is absent. "What is needed," said an inventor from Sayreville, N.J., "is a way to comply with car-seat regulations without having to deal with a conventional children's car seat all the time."

To meet this need, he designed the EZ SEAT, a modified children's car seat that serves as a more convenient, space-saving and less intrusive alternative to conventional children's car seats. It eliminates the need to work around it or remove it when the child isn't occupying it. It also eases reinsulation of the vehicle's backseat. As a result, it saves time and effort. Ergonomic and easy to use, the EZ SEAT also can be produced in many design variations.

The original design was submitted to the New Jersey office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-NJD-1031, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
