Courteous Driver Messages Invented by InventHelp Client (ORD-2270)

InventHelp, founded in 1984, is submitting the GRATITUDE SIGNALS to applicable companies for their review.

Pittsburgh, PA (PRWEB) November 04, 2016 -- There's probably not a driver on the road who hasn't been delayed by road construction and other types of traffic congestion. At these times, it's nice to encounter a polite motorist who waits to give others a chance to merge. Thanks to the efforts of an inventor from Ocoee, Fla., there is now a way to show appreciation for this act of kindness.

She developed the patent-pending GRATITUDE SIGNALS to promote courtesy among drivers. As such, it has the potential to improve highway safety by reducing the risk of automobile collisions at merge points. At the same time, it eases frustration and stress leading to road rage. In other words, it improves positive communication among motorists. It is also compact, lightweight and easy to install and operate. In addition, it is convenient, effective and affordably priced.

The inventor's personal experience inspired the idea. "This concept came to mind when I was in line on the highway trying to merge and had to wait until 11 cars passed before, finally, the driver of the 12th car allowed me into the flow of traffic," she said. "I wanted a way to show my appreciation for that driver's courtesy."

The original design was submitted to the Orlando office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-ORD-2270, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
