

## **Winch Mount with Towing Capability Invented by InventHelp Client (ORD-2280)**

*InventHelp is attempting to submit the A HITCH WINCH MOUNTING SYSTEM to companies for their review.*

PITTSBURGH, PA ([PRWEB](#)) November 04, 2016 -- While there are adequate solutions available for maneuvering heavy equipment with trucks and winches, these options do not allow the trucker to tow a trailer without first removing the winch mount to attach the trailer hitch. Fortunately, an inventor from Orlando, Fla., has devised a universal winch mount.

He developed a prototype for the patent-pending A HITCH WINCH MOUNTING SYSTEM to enable the use of a trailer and other hitch accessories at the same time as the winch. As such, it eliminates the need to remove the winch mount to use a trailer hitch. At the same time, it allows the winch to be removed and stored when not in use to prevent theft. Another advantage is its ease of installation and use. It, therefore, saves considerable time and effort. It is also convenient, effective and affordably priced. In addition, it is versatile, durable and practical.

The inventor's personal experience with conventional winch mounts inspired the idea. "I wanted to give a vehicle owner simultaneous access to a trailer hitch for towing and a winch for lifting and moving heavy equipment or vehicles without having to remove the winch mount," he said.

The original design was submitted to the Orlando office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
