

InventHelp Inventor Develops System for Detering Rodents from Parked Vehicles (SAH-1065)

InventHelp, based in Pittsburgh, Pa., InventHelp is submitting the MOTOR RAT PACK to companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) November 05, 2016 -- "When a vehicle gets a rodent infestation, it is a pretty solid bet that the wiring will be chewed up and shot," said an inventor from Sonoma, Calif. "In order to protect against this and other types of damages caused by rodents, I developed this deterrent system."

He created a prototype for the MOTOR RAT PACK to ward away rodents so that they do not nest inside the vehicle. The unit safeguards sensitive components and parts from damages. This provides added peace of mind when leaving a vehicle parked outdoors. Also, it saves the owner from having to pay for repairs due to rodent damage. Furthermore, the invention is adaptable for use with any vehicle.

The original design was submitted to the Sacramento office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-SAH-1065, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
