

InventHelp Inventor Designs Alternative Barbell-Training Method (SDB-946)

A leading inventor service firm, InventHelp is submitting the TIRE IRONS to applicable companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) November 06, 2016 -- An inventor from San Diego, Calif., has come up with a new way to build muscle without marring or denting the floor or ground on which the workout takes place. "My grandfather used to lift weights in a way that both protected the floor and intensified his workouts," he said. "This inspired me to develop his idea and make weight training easier."

The inventor then created a prototype for TIRE IRONS, which provides a safer and more intense way to work out with a barbell. It protects the floor or ground from impact damage, as well as intensifies the building of muscles. It also has a cool urban look that appeals to vehicle enthusiasts.

Featuring an easy-to-use design, the invention is ideal for fitness enthusiasts, gyms and fitness centers.

The original design was submitted to the San Diego office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-SDB-946, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
