

Safety System for Vehicles in Reverse - Designed by InventHelp Client (FED-1655)

A Pittsburgh-based invention company, InventHelp is submitting the HOLOGRAPHIC BACK UP LIGHT to companies for their review.

PITTSBURGH, PA ([PRWEB](#)) November 12, 2016 -- After considering the dangers associated with others not realizing that vehicle are in reverse, an inventor from Lynwood, Wash., decided to improve vehicle safety by providing a better way to let others know that a vehicle is backing up.

The patent-pending HOLOGRAPHIC BACK UP LIGHT is a device that enables a driver to back up his or her vehicle in a safer manner. This ensures that bystanders, pedestrians and other drivers know that the vehicle is reversing. As a result, it helps prevent damages, injuries or fatalities, as well as promotes safety and peace of mind.

The HOLOGRAPHIC BACK UP LIGHT is easy to use, compatible with any kind of vehicle and producible in design variations.

The original design was submitted to the Seattle office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-FED-1655, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
