

InventHelp Client Designs Child Safety System for Automobiles (MIS-128)

A leading invention firm, InventHelp is submitting the FORGET BABY NOT to appropriate companies for their review.

PITTSBURGH, PA ([PRWEB](#)) November 15, 2016 -- Automobile travel with infants and young children can be stressful for a variety of reasons. Thanks to an inventor from Egan, Minn., however, busy parents no longer have the added worry of inadvertently leaving their child behind in a locked car.

He developed the patent-pending FORGET BABY NOT to prevent infants and young children from being forgotten and left behind in a locked car. As such, it saves lives and reduces injuries. It, therefore, improves automobile safety. It does so by alerting drivers and passers-by of danger. Furthermore, it operates automatically and quickly. As a result, it affords peace of mind for motorists with passengers in the back seat. It is also beneficial for pets and vulnerable adults traveling by car. In addition, it is convenient, effective and affordably priced.

The inventor's personal concerns inspired the idea. "Accounts in the news about the growing number of children who die because they are left behind in locked cars for hours and exposed to extreme heat or cold really bothered me," he said. "So much so, that I wanted to find some way to prevent such tragedies."

The original design was submitted to the Minneapolis office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-MIS-128, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
