

InventHelp Inventor Develops Automotive Safety System for Young Children (MTN-2651)

InventHelp, founded in 1984 in Pittsburgh, is submitting the SAFETY SEAT to companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) November 15, 2016 -- "I saw too many news stories detailing the tragic deaths of children who were left in unattended vehicles," said an inventor from Bridgeport, Conn. "I came up with this system in order to protect the safety of young children."

He developed the SAFETY SEAT to alert the driver if a child is left behind in the vehicle. The system reminds the driver to take the child out of the car seat when exiting the vehicle. This prevents a parent or caregiver from forgetting a child. It is designed to enhance the safety of young children. Also, it provides added peace of mind to parents and caregivers. Furthermore, the invention is adaptable for use in new and existing vehicles.

The original design was submitted to the Manhattan office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-MTN-2651, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
