

InventHelp Inventor Develops Braking Safety System for Big-Rig Trucks (ALL-793)

InventHelp is working to submit this idea, the ACTIVE BRAKING SYSTEM, to companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) November 22, 2016 -- "The most common cause of accidents in big rigs is brake failure," said an inventor from Marietta, Ga. "When the brakes heat up while trying to slow down on long downhill stretches of road, this is dangerous. In order to prevent brakes from overheating, I developed this system."

He developed the ACTIVE BRAKING SYSTEM to ensure that the brakes remain cool while driving down long downhill stretches of highway. The system prevents the brakes from overheating. This avoids brake failure, which is designed to improve roadway safety. Additionally, the invention is adaptable for use with both new and existing trucks.

The original design was submitted to the Atlanta office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-ALL-793, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
